PESTS NO MORE.™

REFERENCE GUIDE

To prevent and eliminate crawling insects in your home

CRAWL OUT® REFERENCE GUIDE

WHY ACT QUICKLY

Crawling insects are discreet but very real—and highly irritating—invaders. As winter approaches, many insects make their way inside through the smallest cracks, crevices and openings. Drawn to the comfort of a heated home, they can quickly multiply once they've settled in.

Aside from the fact that this kind of cohabitation is unwanted, some pests can cause damage or contaminate your food. And without the right methods and products, getting rid of them can become a real challenge.

In this guide, we'll explain how to prevent and get rid of crawling insects in your home.

8 ways to prevent intrusions and avoid infestations

1. Keep all food out of reach

- Avoid leaving dirty dishes on countertops or in the sink for extended periods.
- Clean up crumbs and sticky or greasy residue from countertops and floors.
- Avoid leaving overripe fruit out in the open.
- Do not leave pet food and water in their bowls at all times.
- Take out the garbage and recycling at the end of each day.

2. Promptly store food supplies in airtight containers

- Transfer foods sold in cardboard boxes or soft plastic packaging (flour, cereal, pasta) to airtight containers.
- Consume dry foods in soft packaging within 2 to 4 months of purchase.
- Promptly dispose of any suspicious food by throwing it in an outdoor garbage bin.

3. Seal cracks and openings that lead into your home

- Seal small holes, cracks in concrete and gaps around pipes.
- Repair damaged window and door screens.
- Replace worn or damaged weatherstripping.
- Install screens over exterior ventilation openings.

4. Keep firewood away from the house

- Elevate the logs to keep them from coming into direct contact with the ground.
- Store firewood away from the house, never against a wall.
- Bring indoors only the amount of firewood you'll burn within the next 24-48 hours.

5. Control sources of excessive moisture, whether visible or hidden

- Repair leaks under sinks or bathroom vanities.
- Use a dehumidifier.
- Use the ventilation fans in the kitchen and bathroom.
- Address window condensation issues.

6. Store your belongings in plastic bins

- In the basement and closets, replace cardboard boxes with plastic storage bins with lids.

7. Keep your home tidy

- Declutter the basement.
- Organize closets.

8. Maintain the exterior of your home

- Rake up fallen leaves in the fall.
- Trim branches and plants that touch the house and allow moisture to accumulate.
- Clean the gutters every year.
- Keep garbage bins, recycling bins and compost bins away from the walls of the house.

Learn more about how insects get into homes in our article.

THE WILSON® CRAWL OUT® line offers targeted, effective and easy-to-use solutions to help you take back control of your home. CRAWL OUT® targets more than a dozen species of crawling insects that enter homes, attracted by warmth, food and moisture.

Good to know: CRAWL OUT® kills blacklegged ticks, which can transmit Lyme disease.

Where to treat in your home

- Cracks and crevices in walls, floors and ceilings
- Along and behind baseboards
- Under and behind appliances (refrigerator, stove)—especially for ants and cockroaches
- Around sinks, drains and water pipes—especially for silverfish and sowbugs
- In the pantry—for ants, weevils and flour beetles
- In closets, dressers and storage areas—primarily for moths and silverfish, but also for spiders
- Along the edges and underneath carpets and area rugs—for carpet beetles
- Along door and window frames
- Under and behind furniture
- In basement storage areas—for all moisture-loving insects
- Near garbage bins

CRAWL OUT®
Home Pest Control

Use CRAWL OUT® Home Pest Control to help prevent intrusions, eliminate insects at the first signs of activity and tackle both small and large infestations.

With rosemary essential oil for a more pleasant experience

WHERE

Sprayed near entry points, its long-lasting action helps prevent insects from getting inside. Spray on floors, along baseboards, under and behind furniture, in closets, etc. to quickly eliminate insects (within 15 to 60 minutes) and help prevent infestations.
To eliminate pests in the pantry, discard any infested food, vacuum the shelves, then treat with CRAWL OUT® Home Pest Control.

ACTION

- **Fast-acting (15 to 60 minutes):** Quickly kills a wide variety of insect pests.
- **Residual effect lasting up to 2 weeks:** Provides long-lasting protection to help prevent or eliminate infestations.

HOW TO USE

1. Shake well before use.
2. Adjust nozzle to obtain desired spray pattern.
3. Apply directly to insects or infested surfaces.
4. Repeat after 7 days as needed.

Note: Also for outdoor use. Learn how to protect your garden by treating vegetation strips with CRAWL OUT®.

Also available in a 4-L size with a battery sprayer

EFFECTIVE AGAINST

CRAWL OUT® Crawling Insect Killer

Use CRAWL OUT® Crawling Insect Killer to eliminate insects hiding in hard-to-reach areas, even if they aren't present at the time of treatment.

With peppermint essential oil for a more pleasant experience

WHERE

Use to easily treat hard-to-reach cracks, crevices and corners in the kitchen, bathroom, behind and under baseboards, in the basement, etc.

Note: Also ideal for outdoor use on porches, patios and decks.

ACTION

- **Fast-acting:** Contains powerful, fast-acting active ingredients that immobilize and kill nearly a dozen crawling insects within minutes.
- **Residual effect lasting several days:** Its prolonged action helps ensure effective treatment and protects less accessible areas where insects tend to hide.

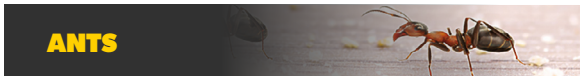

HOW TO USE

1. Shake well before use.
2. Hold approximately 30 cm from the surface to be treated.
3. Spray until the surface is wet.
4. If insects reappear, wait at least 7 days before repeating the treatment.
5. Wait until the treated area is dry before a llowing people or pets to enter the room.

Note: For fleas and ticks: Do not use on animals. Clean and vacuum all areas frequented by your pet; treat the pet's bedding and keep it out of the treated area for one week.

TIP: Learn how to eliminate fleas and ticks in your home to help protect your family and pets.

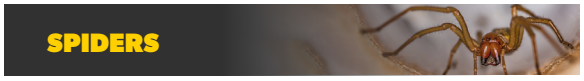

EFFECTIVE AGAINST

CRAWL OUT® Crawling Insect Traps

The eco-friendly, chemical-free solution for monitoring insect intrusions and capturing insects in your home.

WHERE

Anywhere in the home—along walls, behind and under furniture and appliances, in the basement, in closets and near sources of water and moisture.

ACTION

- **Ready to use:** Captures insects with no preparation required.
- **Superior performance:** Its ultra-strong glue effectively traps and holds insects.
- **Long-lasting effectiveness:** The traps remain effective for 60 to 90 days.
- **Preventive action:** Helps monitor insect activity and accurately assess the extent of an infestation.

*No chemicals, no pesticides. The ideal option for homes with children or pets.

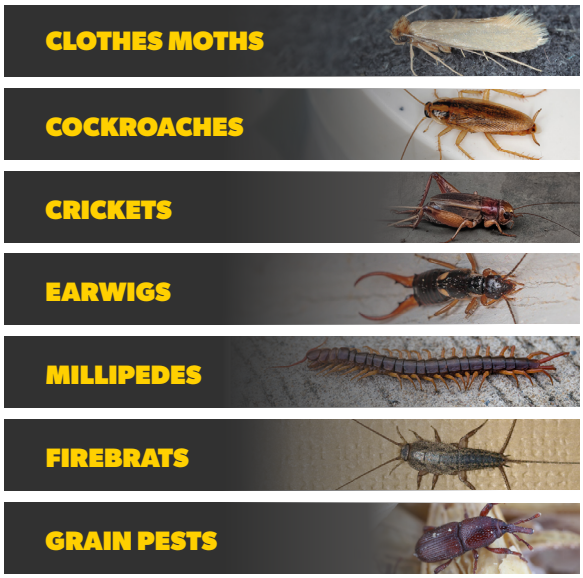

HOW TO USE

1. Remove the trap from the box.
2. Peel off the film at the back of the adhesive strip.
3. Place strategically in corners, against walls, along baseboards, under the refrigerator and stove, or near sources of water.
4. Discard after 60 to 90 days or when the trap is full.

Note: For bed bugs, place the traps on the bed frame, near the mattress, preferably in dark areas. Check every 2 to 3 days.

EFFECTIVE AGAINST

COMBINED STRATEGIES FOR OPTIMAL RESULTS

SITUATION	 HOME PEST CONTROL	 HOME PEST CONTROL WITH BATTERY SPRAYER	 CRAWLING INSECT KILLER	 CRAWLING INSECT TRAPS
Active infestations in cracks and crevices			☑	
Preventive treatment (floors, closets, under sinks, etc.)	☑			
Treatment of large areas		☑		
Hard-to-reach areas (basement, garage)			☑	
Insects in damp areas *Address excessive moisture issues*	☑			
Monitoring and chemical-free solution				☑
Prevention in cupboards and closets				☑
Ticks in pet bedding *Remove the bedding for one week after treatment*			☑	
Ticks along the edge of the property		☑		

Pro tip: Combine traps with insecticide to maximize results—the traps show you where the insects are, while the insecticide eliminates them at the source!

PRECAUTIONS WHEN USING INSECTICIDES

- Do not treat in the presence of people or animals—wait until the surfaces are completely dry before re-entering the treated areas.
- Ventilate treated rooms by opening doors and windows after application.
- Avoid vinyl, aluminum or other sensitive siding, especially in direct sunlight (risk of staining or discolouration).
- Never spray directly on pets.
- Cats are more sensitive to permethrin than dogs—make sure treated surfaces are completely dry before allowing them to move around the area.
